- PayNow / UPI QR (EMVCo)
- Stripe Checkout
- Puppeteer / PDFKit / pdf-lib
- Nodemailer / SMTP
- QR / Barcode
- Google Calendar & Drive
- ExcelJS

DEVOPS & INFRA

PROFILE

Full-Stack Developer specialising in **applied AI** — I ship production **LLM-powered products** end to end. At Jicama Tech I am the sole engineer behind **five live platforms** (KiosCart, EventSH, SingAdvisor, PillGit, jicama.tech): I designed two router-and-specialist **LLM assistants with 101 function-calling tools**, an AI venue designer, vision and JSON-mode extraction pipelines, and the payments, WhatsApp automation, mobile apps and Linux infrastructure around them. I turn complex business workflows into natural-language experiences while keeping the systems behind them typed, tested and live.

EXPERIENCE

AI & Full-Stack Developer · Jicama Tech Pvt. Ltd. Jun 2025 – Present

- Sole engineer behind **five live platforms** — **KiosCart** (commerce & POS), **EventSH** (event management), **SingAdvisor** (training & events), **PillGit** (clinic & patient care) and **jicama.tech** — owning backend, frontend, mobile and the AI layer: **750+ commits and 157 merged PRs in 2026**.
- Designed two **router-and-specialist LLM assistants** — KiosCart: 50 tools across 7 areas; EventSH: 51 role-filtered tools across 11 areas, on three surfaces — on Qwen / Groq with a 3-call budget per request, automatic small-model fallback on rate limits, malformed-tool-call recovery, replies in 6 languages and a 26-case smoke suite.
- Built **vision & extraction features**: an AI venue designer that turns a floor-plan photo into an editable layout, AI event import from a URL, LLM column-mapping for bulk CSV/Excel import, and medical image + clinical-text analysis (ICD-10 hints, risk scoring).
- Integrated **payments** end to end: Razorpay Route marketplace (KYC onboarding, hold/release/refund, signature-checked webhooks), PayNow / UPI dynamic QR (EMVCo + CRC16) and Stripe Checkout token billing.
- Built **WhatsApp automation** on Baileys — per-tenant linking, OTP, order & supplier notifications, paced campaigns with spintax and daily caps — then extracted it into the **@jicama-tech/whatsapp** library (~17k lines, 51 test files, ESM + CJS).
- Shipped **mobile**: Capacitor Android/iOS builds for KiosCart & EventSH and a native **Flutter** app for PillGit released via Shorebird code-push (1.0.1 → 1.0.9) with native Google sign-in.
- Made EventSH **white-label** (one Docker stack per customer, central instance registry, API-key integration live with SingAdvisor); run the shared Ubuntu VPS — Nginx, PM2, Certbot, GitHub-Actions + webhook auto-deploy — and closed unauthenticated admin routes in a security pass.

- NestJS
- React + TS
- MongoDB
- Qwen / Groq / OpenAI
- Function Calling
- Baileys
- Razorpay · PayNow
- Capacitor · Flutter
- Nginx · PM2 · Docker

Full-Stack Developer Intern · MehtaSofttech Pvt. Ltd. Dec 2024 – May 2025

- Built and integrated user-facing web apps with **NestJS, Node.js and Angular 19**, developing REST APIs and reusable frontend components.
- Delivered a **Learning Management System** (NestJS + Angular 19 + PostgreSQL) for courses, quizzes, student progress, certifications, and automated/manual evaluation.

KEY PROJECTS Jicama Tech · public repos linked

KiosCart — AI Commerce & POS Platform Mar 2026 – Present

- Multi-tenant commerce & kiosk POS live on 3 custom domains with **KiosAI**: a 7-area router and specialists over **50 function-calling tools** (orders, catalogue, CRM, analytics, kiosk checkout), Qwen / Groq with small-model fallback and 6-language replies.
- Razorpay Route marketplace payments, UPI / PayNow QR, per-shop WhatsApp with paced campaigns, expense approvals, P&L PDF, supplier purchase orders; lazy loading and on-the-fly WebP cut the initial bundle ~70%.

SOFT SKILLS

- ▶ Ownership of end-to-end features
- ▶ Problem-solving & clean architecture
- ▶ Collaboration & communication
- ▶ Fast learner of new AI tooling

EventSH — AI Event-Management SaaS

Mar 2026 – Present

- **46 backend modules**, 157 merged PRs, ~240k lines of TypeScript. LLM assistant with **51 role-filtered tools** across 11 areas on three surfaces; **AI venue designer** (text or floor-plan photo → editable stall layout); AI event import from URL; LLM column-mapping for bulk visitor / exhibitor / sponsor imports.
- **White-label**: one Docker stack per customer with a central instance registry and an API-key integration pattern (live with SingAdvisor). PayNow / UPI QR payments, Puppeteer tickets, QR check-in with manual override, 5 cron jobs, GitHub-Actions deploy.

NestJS React + TS MongoDB Docker Vision LLM

SingAdvisor — Training, Events & Consultancy Platform

Aug 2026 – Present

- Migrated a Next.js / Prisma site to a React SPA + NestJS API with **31 modules** (~65k lines in 6 weeks): course builder with paid enrolment, memberships with expiry crons, a CRM merging every lead form with EventSH attendees, WhatsApp campaigns, Konva venue editor.
- AI blog writing on Qwen (JSON mode), PayNow dynamic QR (EMVCo + CRC16) and Razorpay checkout, hourly EventSH mirror, webhook auto-deploy with pre-restart data migrations.

React + Vite NestJS MongoDB Baileys

PillGit — Clinic & Patient-Care Platform (formerly CareNest)

Aug 2026 – Present

- Rebuilt a Lovable / Supabase prototype as a production platform in 4 weeks: NestJS + MongoDB (**26 modules**), React web app and a native **Flutter** Android app (~14k lines Dart) shipped via Shorebird code-push 1.0.1 → 1.0.9.
- Medical AI on Qwen with OpenAI fallback: 4-role chat assistant, radiology / dermatology / pathology image analysis, clinical-text tools (entities, summaries, risk, ICD-10); family profiles with consent-based sharing, Google Calendar sync, Hindi / Gujarati / Marathi.

NestJS React Flutter Qwen-VL

@jicama-tech/whatsapp — Multi-tenant WhatsApp library · **Tangr** — Embeddable Feedback SaaS

Jun – Sep 2026

- **Library**: drop-in Baileys integration for NestJS + React — per-tenant QR / pairing linking, lease-guarded sessions, encrypted credentials, paced sending with crash-safe idempotency keys; ~17k lines, 51 Vitest test files, dual ESM / CJS build, threat model.
- **Tangr** (open source, MIT): one-tag feedback widget + SDK + React dashboard with origin-locked API keys, Stripe token billing, role-based teams and AI summary / duplicate grouping (Qwen or Ollama). github.com/vasharma-dev/feedback-plugin

TypeScript Vitest Express + Prisma Stripe

EDUCATION

Master of Computer Applications (MCA)

2023 – 2025

Shri Chimanbhai Patel Institute of Computer Applications · Sardar Vallabhbhai Global University · CGPA 7.71

Bachelor of Computer Applications (BCA)

2020 – 2023

Navgujarat College of Computer Applications · Gujarat University · CGPA 7.07
